## VENEER SHEETS

Veneer Laminates are real wood veneer faces laminated to a variety of thin backers, flexed and sanded to create a convenient, easy to use 'flexible' sheet of wood veneer. Edgemate has a veneer laminate type and size for virtually any application.

### APPLICATIONS

Veneer Laminates have become increasingly popular as alternatives to plain veneers, plywood and solid woods in applications where the beauty and quality of real wood are desired, but the availability, lack of flexibility and difficulties in handling other wood products restrict the applications. Popular applications include columns, tabletops and bases, curved panels, drum tables, cabinet repairs and refacing, as well as numerous other creative uses.

### GRADED FACES

A full line of Veneer Laminates is available, including paper, and real wood backed veneers. Edgemate veneer sheets are manufactured to HPVA grade standards to ensure each sheet is of the highest quality and appearance. A broad range of domestic and imported species is available in standard and custom sizes.

### CABINETMAKER PRO VENEER SHEETS

Cabinetmaker Pro Veneer Laminates are selected veneers laminated to 10, 20, or 30 mil kraft paper backers, "flexed" and fine sanded. These highly flexible wood veneers are ideal for wrapping contours and shapes as well as flat overlay applications. Incremental thickness in the backer sheet reduces the flexibility of the product, but provides increased masking of the substrate defects, improved appearance and ease of application.

### ALLWOOD TWO-PLY SHEETS

Allwood Laminates are HPVA grade face veneers, which have been laminated to a 'cross-ply' veneer backer, providing a more rigid 'all wood' product. The cross-ply backer provides excellent stability and

allows easy application, handling and shipping. The All-wood construction minimizes any appearance of a 'dark line' between the veneer and the laminated surface.

### DOMESTIC AND EXOTIC STOCK SPECIES

Edgemate produces a complete line of domestic species combined with a broad exotic offering covering over 50 stock species of veneer. Multiple cuts and construction options are available including sequenced matching, end matching and balanced faces. Sheets are also available with a preapplied, high quality pressure sensitive adhesive.

### QUALITY COMES FIRST

Quality veneer, tight seams, beautiful finish, and sanding combined with experienced veneer grading technicians ensure success for any sheet veneer application project.
